The colour coding of the bins (and also of the corresponding transporting vehicles) have to be as per the S W M Rules, 2016. Efficiency has to be achieved by deployment of mechanized system. Manual systems will be allowed only

on those roads where mechanical system may not be feasible due to lesser right of way.

Note: Bin(s) of required size [in any number, as per their requirement] to segregate the MSW at source shall be purchased/maintained by the producer/generator him/herself.

2.3. Transportation of MSW

The waste collected from the doorsteps is brought to the transfer station if required, where it is/would be shifted to transfer trailers [no transfer of MSW at ground]. Bulk refuse carriers would be deployed to take the MSW transferred in these large bins and or transfer trailers to the site for processing and disposal. Collection vehicles operating in the areas between the disposal site and the nearest transfer station may be sent directly to the disposal site (site for processing and disposal).

Different types of waste would be transported in different vehicles which would also be colour coded as above. From the transfer stations, different types of waste would be sent to respective destinations for further processing and final disposal. The Concessionaire will allow the access to monitoring system [as and when required] to independent consultant as well as to the staff of the ULB. The Concessionaire shall be obligated to collect, transport and process any MSW as instructed by the Authority/ULB within the project area (as defined in the Schedule 1) on receipt on written communication from the Authority to this effect.

2.4. Transfer Stations

The operator would have to build one transfer station in each zone depending on the Project Area and volume of waste generated. Land would be provided by the ULB on lease for the duration of this concession. The transfer stations would be

designed for all weather operations and would be environmentally compatible for proximity to inhabited localities. Therefore, these would have the following components:

- a) Adequate space for all operations within the premises of the transfer station, which would have solid wall fencing of minimum 2 m height.
- b) Operations within the transfer station would be under cover, so that dust and noise could be effectively controlled. At the same time, the operation would not be hampered during precipitation as well.

- c) All internal roads, ramp and platforms at different levels would be concrete built and should withstand load of moving machineries/vehicles.
- d) The transfer station shall be maintained as per the standards set in the O&M Manual. The wash water should go through a sediment basin and then to the city sewer.
- e) The selected operator would have to make appropriate site-specific designs as per the type of vehicles and containers to be handled and the method applied for transfer of the waste.
- f) Prospective designs may be discussed with the ULB during the pre-bid meeting but detailed discussion followed by written approval would have to be taken from the Independent Engineer for their adequacy, before construction.

2.5. Processing Technology
